
The floor of $f(y) = y^2 e^{-y^2}$: median and 10–90% band over 20 sketches
(a) spectra, $\sigma^2 = 1.00$
$d = 1000$
$d = 3000$
$d = 10000$
predicted floor $E_{\geq 3}/d$
λ_j
j
(b) Hermite split at $d = 3000$, $\sigma^2 = 1.00$
K_W
Hermite degrees ≤ 2
Hermite degrees ≥ 3
predicted floor $E_{\geq 3}/d$
j
(a) spectra, $\sigma^2 = 3.64$
$d = 1000$
$d = 3000$
$d = 10000$
predicted floor $E_{\geq 3}/d$
λ_j
