
Exact spectra of K_W: Gaussian data, $H \propto \mathrm{diag}(j^{-1.31})$, $\mathrm{tr}\, H = 1$, $d = 10000$, $v = 2d$; median and 10–90% band over 20 sketches
(a) monomials
(b) polynomials that are not monomials
$\lambda_j(K_W)/\lambda_1$(population)
eigenvalue index j
y
y^2
y^3
$j^{-1.31}$
population spectrum
$y + y^2/2 + y^3/6$
$\mathrm{He}_3(y) = y^3 - 3y$
